Notes

- All monetary values are in NZD.
- `listing_source` is a discriminator column used in `CONTACTS` and `AD_REVENUE` to identify which listing table the `listing_id` refers to. Values: `marketplace`, `motors`, `property`, `jobs`.
- VARIANT columns (`preferences`, `metadata`, `campaign_metadata`) store semi-structured JSON data.
- No formal foreign key constraints are defined; relationships are maintained by convention.
